Novel isolated, purified, or recombinant nucleic acid comprising polyketide modifying gene, there gene encodes polyketide modifying enzyme e.g., MegR, MegK, or MegM enzymes useful for producing modified polyketide.

Example 2; SEQ ID NO 2; 51pp; English.

The invention relates to a novel isolated, purified, or recombinant nucleic acid (I) comprising a polyketide modifying gene, where the gene encodes a polyketide modifying enzyme chosen from MegR, MegR, MegK, MegCIV, MegCIV, MegCIV, MegCIV, MegGIV, MegBIII, MegI, and MegM enzymes. A method of the invention is useful for producing a modified polyketide, which involves culturing a recombinant cell comprising the recombinant nucleic acid

The cell produces megosamine and can attach megosamine to a polyketide, where the cell, it its naturally occurring non-recombinant state cannot produce megosamine. The present sequence contains downstream megalomicin modification enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             몽
                   This sequence represents a fragment of the Saccarapolyspora erythraea genome, designated erya. The polypeptides encoded by this region are involved in the biosynthesis of the polyketide segment of erythromycin. eryA is organised in modules and each module takes care of one condensation step. The precise succession of elongation steps is dictated by the genetic order of the modules. This fragment may be specifically altered such that novel polyketide molecules of desired structure are produced. Three types of alteration may be produced; those inactivating a single function in a module which does not arrest acyl chain growth; and those affecting an entire module. The mutations may be introduced by gene replacement. (Updated on 25-MAR-2003 to correct PN introduced by gene replacement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Saccarapolyspora erythraea; erythromycin; condensation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      segment that corresponds to a reference polypeptide segment encoded by a naturally occurring gene. In particular, the gene is a polyketide synthase coding sequence. The composition and methods are useful for producing synthetic genes or libraries of such genes, and for manipulating and characterizing genes and corresponding encoded polypeptides. The synthetic genes may be used for facilitating production of therapeutic or commercially important polyketide compounds. These may be used in human and veterinary medicine, pharmacology, agriculture and molecular biology. The present sequence is a synthetic gene used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 9510 BP; 1587 A; 2635 C; 3236 G; 2052 T; 0 U; 0 Other;

                                                                                                                                                                                                                  The invention relates to genes and proteins involved in the biosynthesis of macrolides by microorganisms. In particular it relates to the nucleic acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Microomonospora carbonacea. The invention is useful for the biosynthesis of macrolides by microorganisms. It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in
                                                                                                                                                                        rosaramicin. It is useful to catalyse certain biochemical reactions, vitro or in vivo, to direct or enhance the synthesis or modification polyketide, polyketide substrate or its precursor. The present sequen is M. carbonacea polyketide synthase (PKS) type I gene. (Updated on 2

In particular it relates to the nucleic acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Micromonospora carbonacea. The invention is useful for the biosynthesis of macrolides by microorganisms. It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in vitro or in vivo, to direct or enhance the synthesis or modification of a polyketide, polyketide substrate or its precursor. The present sequence is M. Carbonacea polyketide synthase (PKS) type I gene cluster. (Updated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 þ
   The present invention relates to the cloning and sequencing of the cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin.

                                                                                                                                                                                                                                     The present invention relates to a gene cluster (ADZ51725) for the CC biosynthesis of FR-008 polyketides derived from Streptomyces sp. FR-008. CC FR-008 polyketide, a hetaene macrolide having aglycone containing 4-CC aminoacetophenone, has antifungal activity and also high toxicity against mosquito larvae, and so is highly useful in agricultural and medical CC fields. The gene cluster comprises the following genes: fscA, fscC, fscB, CC fscF, fscE and fscD, which code for modular polyketide synthase (PKS); CC fscTI and fscTII, which code for ABC transporter proteins; fscRI, fscRII, CC fscRIII and fscRIV genes which code for regulator proteins; fscR which CC codes for cytochrome P450 monoxygenase; fscMI which codes for ferredoxin CC protein; fscTE which codes for thioesterase; fscMI which codes for CDP-ketosugar CC aminotransferase; fscMII which codes for GDP-mannose-4,6-dehydratase; fscC plycosyltransferase; fscMII which codes for GDP-mannose-4,6-dehydratase; fscC which codes for PAD-dependent monoxygenase; pabAB which codes for ADC CC lyase. The genes of the gene cluster of the invention can be used to CC worldy recombinant microorganisms capable of producing PR-008 CC polyketides, also to increase the productivity of the existing FR-008 CC modification.
                                                                                                                                                                   Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a Amycolatopsis mediterranei rifamycin comprises gene cluster DNA fragment from the present invention. The DNA comprises a DNA region involved directly or indirectly in the custer responsible for rifamycin synthesis, including the adjacent CC DNA regions to the right and left which, by reason of their function in CC connection with rifamycin biosynthesis, qualify as constituents of this crifamycin processes and functional fragments, derivatives or CC constituents of these. The Amycolatopsis mediterranei rifamycin synthesis gene cluster DNA fragment can be used for producing rifamycin, rifamycin cc modifying genes involved in ansamycin or rifamycin rifamycin, rifamycin be used for inactivating or modifying genes involved in ansamycin or rifamycin in activating or can be used for constructing mutant actinomycetes strains from which the can be used for assembling a cc library of polyketide synthases, which can be used for assembling a cc library of polyketides. A hybridisation probe of the invention can be used for identifying DNA fragments involved in the biosynthesis of

CC The invention relates to an isolated and purified nucleic acid segment CC comprising a desosamine biosynthetic gene cluster, a fragment or its CC biologically active variant, where the nucleic acid sequence is not CC derived from the eryC gene cluster of Saccharopolyspora erythraea or CC Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster encodes proteins which synthesise methymycin, pikromycin, necomethymycin, narbomycin or a combination of these CC compounds. Recombinant or augmented cells comprising the desosamine CC and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins CC are useful for synthesis of methymycin, pikromycin, neomethymycin and CC useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) CC useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) componers. The compounds produced by the recombinant host cells are useful cas biopolymers, e.g., in packaging or biomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                narbonolide polyketide synthase medical application; industrial macrolide biosynthetic protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises coding sequences for the narbonolide polyketide synthase gene from Streptomyces narbonensis. The DNA sequence of the invention are useful for providing polyhydroxyalkanoate monomer for medical and industrial applications. The present DNA sequence encodes a Streptomyces venezuelae macrolide (pik) biosynthetic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid comprising a narbonolide polyketide synthase gene from Streptomyces narbonensis, useful for providing a polyhydroxyalkanoate monomer for medical and industrial applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sherman
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-OCT-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-OCT-2003

CC comprising a desosamine biosynthetic gene cluster, a fragment or its CC biologically active variant, where the nucleic acid sequence is not CC derived from the eryC gene cluster of Saccharopolyspora erythraea or CC Streptomyces antibioticus. The invention also relates to a macrolide CC biosynthetic gene cluster, or fragments thereof. The macrolide CC biosynthetic gene cluster, or fragments thereof. The methymycin, neomethymycin, narbomycin or a combination of these CC compounds. Recombinant or augmented cells comprising the desosamine CC and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins CC are useful for synthesis of methymycin, pikromycin, neomethymycin and CC arbomycin. The alternative termination of polyketide synthesis may be CC useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) CC monomers. The compounds produced by the recombinant host cells are useful as chemically active agents, in packaging or biomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents, imminerum-research.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

CC pikromycin, neomethymycin, narbomycin or a combination of these
CC compounds. Recombinant or augmented cells comprising the desosamine
CC and/or macrolide biosynthetic gene clusters are useful for the production
CC of biologically active macrolides. The macrolide biosynthetic proteins
CC are useful for synthesis of methymycin, pikromycin, neomethymycin and
CC useful to prepare novel antibiotics and polyketide synthesis may be
CC useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA)
CC monomers. The compounds produced by the recombinant host cells are useful
CC as biopolymers, e.g., in packaging or biomedical applications, to
CC engineer PHA monomer synthases or to prepare biologically active agents,
CC chronic obstructive pulmonary disease as well as other diseases involving
CC respiratory inflammation, cholesterol-lowering agents to treat asthma,
CC chronic obstructive pulmonary disease as well as other diseases involving
CC respiratory pathogens, as well as variety of organisms, e.g.,
CC respiratory pathogens, as well as variety of organisms, e.g.,
CC respiratory pathogens, as well as viral parastic pathogens, or as crop
CC polyhetides in plants. The present sequence represents the macrolide
CC polyhetides or plants. The present sequence represents the macrolide
CC biosynthetic gene cluster (pik) from Streptomyces venezuelae ATCC 15439.
